Major updates The AutoCAD software has a major release every two years. The last major release was AutoCAD 2015. Prior to that, in the intervening years, updates were released every year. In 2014 and 2015, three different cad apps were released; two are mobile apps, one is for desktop/laptop computer. In 2018, only two apps were released, AutoCAD for mobile and the desktop version of AutoCAD, with neither app supporting Windows tablet computers. Release history Autodesk AutoCAD was introduced in 1982 and its first public demo was held at the Winter NACIS show. Up until 2005 Autodesk published the CAD Revue magazine, and had at least one release a year. However, by the mid-2000s AutoCAD stopped releasing a

CAD Revue magazine, and the next CAD release of AutoCAD (2005), was a major release with new functionality and features. CAD Revue was re-branded and is now published as AutoCAD Tech News. From the 2005 release, a new developer platform and release cycle was adopted. The largest update to AutoCAD since 2005 is AutoCAD 2015, released on August 31, 2015. Autodesk has also released a series of add-ons for AutoCAD called Feature Packs. They are often implemented as new subpackages, or as subprograms that work with the main package, as a separate branch of the autocad.com website. Feature Packs are usually released on a 3-6 month cad cycle. The AutoCAD 2017 release added several new categories of Feature Packs to the standard base autocad.com website. Autodesk AutoCAD 2019/2020 The release date of AutoCAD 2019/2020 is currently unknown. In July 2016 Autodesk announced that the latest version of AutoCAD will be released in August 2016. AutoCAD 2017/2018 releases were significantly different and introduced several new features. AutoCAD 2017/2018 releases Several other changes were announced. For example, the Ribbon (toolbar) was replaced by a dropdown menu. The old Project Center window was replaced by a revamped Project Center window. Other components were also replaced, including the BuildManager in the drawing area, which was replaced by the ToolManager. There was no concept of a Graphical Design Center. New in AutoCAD 2017 was a new design template

Architecture The Architecture product category consists of different software applications to create, plan and schedule the design of building projects. It includes various design applications for the design of architectural elements such as buildings, walls, doors, windows, stairs and other components. Architecture models represent the building design in a form of 3D surfaces. Typically, the building parts are created on a computer in several design phases: the design of interior spaces and elements, the design of exterior spaces and elements, the creation of façade, and the design of other spaces and elements. These models are then
