AutoCAD's roots are in the 1979 CAD program AutoCAD. Although the software came out in the early 1980s, it was not until Autodesk released it in 1982 that the first successful desktop AutoCAD was shipped. The commercial CAD industry was driven by the development of AutoCAD, with many companies using it to develop their own products. A job applicant's portfolio is nothing but a collection of the materials used to do the work of a specific job. A portfolio contains pieces of material to be used to complete the project, be it a simple sketch of a single letter or a fully-developed architectural drawing. Ideally, the portfolio is diverse and covers a number of mediums, materials and styles of work. The portfolio document should be large enough to be able to demonstrate the capabilities of the artist, but should not be so large as to not be easily transported and presentable. The most important thing about a portfolio is that it is developed and customized according to what you are going for, or what your organization is looking for. In this article, we will show you how to create a simple 1D AutoCAD portfolio in AutoCAD. First of all, you will need a CAD system with AutoCAD. It can be an active or inactive license. You can use a demo version to create a 1D portfolio. After you have activated your AutoCAD, you can create a basic portfolio document by following the below steps: Select File > New and enter the name of the portfolio. You can change it later. Click OK. For this 1D portfolio, it is a long profile, so click the Format > Modify current selection > Units and select mm. This will make it easier to work with later. Click the Format > Modify current selection > Units again and change it to mm. Then, go to the Format > Modify current selection > Arrange > Send to back and click OK. Click Edit > Paste and enter the name of the layout in the text field (in this case, "Portfolio"). Click File > Save As and save it in your main project folder. On the right side panel of

the DesignCenter, open the Library, click the Basic Library Category and select Basic Materials. You will see that there are two materials (paper and fiber) listed. Click on paper, and click the plus sign (+) to add
