Use AutoCAD is a desktop-based computer-aided design (CAD) and drafting software application that can be used for a variety of tasks. This includes creating a design for architectural structures, such as bridges and buildings, or designing mechanical parts and assemblies, such as automobiles and parts for home appliances. This section focuses on the CAD application, and the subsequent sections describe how to make use of the application. Creating and editing drawings The first step to using AutoCAD is to open a drawing. Selecting the file that you wish to open is one of the main tasks performed in AutoCAD. You can open a drawing from the file browser, by choosing a file type or by selecting the file from the hard drive. If you are working on a drawing file from a network drive, you can choose the drive and folder path from which you want to open the file. If you find that you want to open a drawing, but cannot find it in your folder, you can perform a search. This can be done from the search menu, or by pressing the F3 key and selecting Search. You will be prompted with a search window, which will show all files on your computer that have the selected file name. If you select a drawing that has been saved in the wrong file format, you will receive an error when you try to open it. You can change the file format by choosing the File | Change Current File Format menu option. You can also choose this menu option to change the file format for multiple files. Once you have opened a drawing, the next step is to perform a type of editing, or a combination of different types of editing, to the drawing. Each type of editing is listed below. Select Edit, which allows you to select a shape within a drawing. Selecting Edit will open the selection window and display the selection indicator. You can choose the shape by clicking on it. You can also hold down the Shift key while you click on a shape. Dragging the mouse over a shape will select it, and holding down the Shift key while dragging will deselect all other shapes. You can also create a text box or box style using the Create Text or Create Box tools. To create a text box or box style, follow these steps: Choose Create from the Tools | Modify submenu or press the T key. Select the shape from which you want to create the text box or box style. Press the
